

KONGPOP RUSCHATAPAPARPONG

JUNIOR SOFTWARE DEVELOPER

I am a junior software developer from Thailand. I enjoy learning new things. About coding that I didn't even know existed. My future goal is to become a full stack developer within 3 to 5 years. I am currently primarily a front-end student, with a special interest in vue.js but am not blocking off further studies. There are a few back-end studies such as express Node.js and mongodb.

I like this career because I'm interested in innovations that change the way people live. I would like to join this journey of the future. I find facing problems as a fun challenge to get through as a skill-building experience.
